

Homes™ for Real Estate

Qfuse™ is a total solution for realtors and property managers who want to add a new dimension to their marketing efforts. Qfuse makes it easy to create QR codes that can be placed in advertisements, signage, flyers and just about any other marketing materials. When the code is scanned it shows a mobile website specially formatted for smartphones, featuring your property!

Mobile Sites Promoting Homes for Sale

Create professional-looking websites which can be used to showcase properties for sale. Upload property images; display key information such as asking price, square footage, number of rooms, etc; make contacting you easy as the push of a button.

Mapping and GPS

Display a physical map (with driving directions) right on the site so potential buyers can see exactly where the home is located.

Contacts at a Touch

Qfuse makes it easy for everyone to reach the real estate agent with click-to-call, text messaging, and email.

Homes™ for Real Estate

QR Codes

When you put a QR Code on your real estate marketing/promotional materials you open the door to display information about a home or property in an interactive way that no basic printout can do.

Photos & Video

Showcase images of the exterior and interior of any property; you can display as many as you want. Or maybe you can now take advantage of video walkthroughs which guides the prospect through each room for an interactive experience that a sign or flyer could never do.

Social Sharing

Qfuse makes it easy for visitors to share your property with their friends on popular social networks for additional exposure through personal referrals.

Easy to Setup & Manage

Your real estate mobile site setup is easy with pre-defined templates; all site pages and QR codes are managed from a simple dashboard interface.

Request a Demo

Let us show you how Qfuse can bring a new dimension to your real estate marketing with mobile websites and QR codes.
